

GAS SAFETY CERTIFICATE

WHY DO WE NEED A GAS SAFETY CERTIFICATE

To ensure the safety of any gas appliances on the premises.

INFORMATION

Gas Safety (Installation & Use) Regulations 1998. These regulations cover work on gas fitting, both natural and LPG in premises such as shops, domestic premises, restaurants, school and hospitals. In these premises, the work on gas fittings must be carried out by someone on the Gas Safe Register.

The engineer will check that ventilation passages are not blocked and are in working order; that the safety devices are operating efficiently; that appliances are burning at the correct operating pressure and that harmful gases are transferring cleanly outside of the premises.

WHEN SHOULD WE SEND THE CERTIFICATE

On Application and Annual Renewal
