a. Due to the level of data available, the benchmarking enercise is informed by research collected in relation to the larger national supermarket operators only (namely Teccs, Sainsbury, Auda, Morrisone, Waltrose, Add and Lidl), based on the destinations issted in Tables 2 and 3—the relevant (larger) stores are shown in blue. Assumption is made that all other stores are trading at 'equilibrium' with benchmark -shown in black.

b. The gross restal floorspace has been sourced from Valuation Office Agency (VOA), apart from for Tesco Express on Lower Addiscombe Road and Tesco Express on Shirley Road where this was estimated by Nexus as these aspared (Esco PES persentons.

c. Based on Nexus Planning professional judgement Net sales area is assumed to be 70% of the gross retail floorspace.

d. The the proportion of net floorspace dedicated to convenience goods sales is taken from the company benchmark average (sourced from Global Data 2022).

e. The average sales density has been sourced from GlobalData 2022.

E. For the stores shown in blue, the benchmark convenience turnover is calculated by multiplying the sales area by the sales density. It is assumed that all other stores are 'trading at equilibrium' (i.e. their 'benchmark' turnover equates to that indentified by the sales) and the plays the 2's limited by the sales area.

g. Survey derived performance of stores is sourced from Table 4b.

Notes
Assume Gailbrium at Base Year and Constant Market Shares
STEP - Survey Derived (with Inflow) surrovers assume constant market shares over the forecast period, derived from Table 18b.
STEP 2. Assumption in made that comparison retail market is in 'equilibrium' at the base year (a. 2021, benchmark' turnovers are equivalent to the survey-derived turnover levels, with inflow). Average productivity growth rates from Figure 4b (density growth rate) of Experian Retail Planner
Briefing Note 20, are then used to project the available benchmark expenditure.

STEP 3: The forecast residual expenditure capacity (one commitments) has been derived from Steps 1 and 2.

STEP 4: The tumover of all known commitments has been derived from Table 18c. It is assumed that all commitments would be operational and with mature trading conditions by 2029.

STEP 5: The Surplus Expenditure capacity incorporates the forecast tumover of all commitments (Step 4).

STEP 6: The Surplus Expenditure is converted into a net/gross floorspace capacity, based on Nexus judgement. Average sales density is assumed to be £3.500 per sq.m which Nexus Planning considers to be towards the lower end of what could be achieved. The sales density for respective years is "grown" using Figure 4b (density growth nate) of Experian Retail Planner Briefing Note 20

STEP 7: The Surplus Expenditure is converted into a net/gross floorspace capacity, based on News judgement. Average sales density is assumed to be £5,500 per sq.m which News Planning considers to be towards the higher end of what could be achieved. The sales density for respective years is "grown" using Figure 4b (density growth rate) of Experim Renal Planner Enering Note 20.
